Report

Current state - 11/05/2021

Lines of Code and files (consulted using `cloc`)

3488 text files
1997 unique files
2599 files ignored
JavaScript: 239 files
                   29883 lines of code

Main things to do

- ❏ Delete all commented code
- ❏ Delete all code that is not used
- ❏ Unify components (and their styles) used throughout the app
    - ❏ preview cards (i.e. experiences, hotels, etc, they're quite similar)
    - ❏ search bar
    - ❏ text inputs
    - ❏ headers
    - ❏ buttons
        - ❏ black
        - ❏ white
        - ❏ gray
        - ❏ outlined
        - ❏ red-outlined
- ❏ Add constants (spacing, [text] sizes, colors)
    - ❏ Note: This might already be done in folder config/, so it just needs to be applied
- ❏ Linting (there's already a prettier and a eslint setup, so we can use that)
- ❏ Hooks (i.e `useState`) should NOT be INSIDE conditions (if-else, switch-case, etc)

Files to check/refactor (these are the folders)
